PRESS RELEASE

Espresso Data Privacy 2.0: data protection that acts inside the systems

Zug-based Yoosana GmbH launches the new generation of its Privacy Operations Cockpit, in production since 2024 – six modules for organisations with IT that has grown over the years.

Zug, 21 October 2026 – Yoosana GmbH is launching Espresso Data Privacy 2.0. The software finds personal data across all of an organisation's systems, maintains the register, answers requests from data subjects, deletes according to fixed rules and proves every step – operated in the customer's data centre or cloud. Espresso has been in production since 2024; its reference is the Swiss pension insurer Pax, which uses it to delete personal data automatically across SAP and non-SAP systems.

There are plenty of concepts – what is missing is action

Many organisations have registers, policies and deletion concepts. But personal data sits in core systems, archives, file storage and Microsoft 365, linked by dependencies that no one fully grasps. Deadlines are postponed, and when the auditors ask for proof, the search begins. AI assistants add new data stores: prompts, chat and meeting transcripts.

Deleted means done

Espresso starts where documentation tools stop: inside the systems themselves. Data that has demonstrably been deleted can no longer leak, no longer distorts analyses and no longer has to be disclosed in response to access requests. Approvals by authorised people ensure that people decide; every deletion run leaves an auditable log.

> "Data protection must not end in a document. It has to take effect in the systems – and be provable. With version 2.0, Espresso becomes a cockpit for the entire cycle – from finding and answering to deleting and proving. Built for organisations whose IT has grown over the years and who do not want to launch a major project for it."
>
> **Rico Friedrich, Founder and Managing Director of Yoosana GmbH**

Six modules, one cockpit

Each module can be licensed individually; together they provide a picture of all of an organisation's data protection obligations.

- ✓ **Data Discovery** finds personal data in file storage, databases and Microsoft 365.
- ✓ **Subject Request** answers access and erasure requests across all systems, on time.
- ✓ **AI Privacy Control** keeps stored AI data such as prompts, transcripts and Copilot content in view.
- ✓ **Privacy Register** maintains the register from real findings instead of questionnaires.
- ✓ **Data Deletion** controls deletion across many systems – with approvals and a deletion log.
- ✓ **Privacy Delivery** shares data for a defined purpose and pseudonymised, for example with AI services.

Operated by the customer, connected via open interfaces

Espresso runs in the customer's data centre, in their cloud or with an operating partner; personal data stays under the customer's control. Applications are connected via open interfaces, without touching their business logic – across SAP and non-SAP landscapes alike. The software supports the requirements of the Swiss Federal Act on Data Protection and the GDPR as well as statutory retention periods.

> "Thanks to the Espresso Data Privacy solution, we were able to streamline [our] processes significantly and achieve full compliance with data protection laws effortlessly. The system ensures smooth, uninterrupted operation across our entire company – with minimal effort."
>
> Marco Roth, Head of Operations, Pax

Availability

Espresso Data Privacy 2.0 is available now from Yoosana GmbH. Getting started begins with a conversation and a demo; an assessment provides a clear picture within six weeks. Integrators, consultancies and IT service providers in Switzerland and the German-speaking countries can introduce, operate and resell Espresso as partners.

About Espresso Data Privacy and Yoosana GmbH

Espresso Data Privacy™ is the Privacy Operations Cockpit for organisations with IT that has grown over the years: find personal data, record it, answer requests, delete it, control AI data, share it in protected form and prove every step. It is developed by Yoosana GmbH, based in Zug, Switzerland. With its Workflow Services, Yoosana also makes business processes across many systems reliable – from analysis to implementation with Temporal.
